**Dallas County Reports 339 New Positive 2019 Novel Coronavirus (COVID-19) Cases
343 Total Cases Reported Today Including 4 Older Cases and 6 Probable Cases**

DALLAS -- As of 2:00 pm October 7, 2020, Dallas County Health and Human Services is reporting 343 additional positive cases of 2019 novel coronavirus (COVID-19) in Dallas County, including 1,040 confirmed deaths. There are 6 additional probable cases to report today. Of the 337 new confirmed cases we are reporting today, 232 came through the Texas Department of State Health Services' (DSHS) electronic laboratory reporting (ELR) system, and only four are considered old cases. Please see a provisional breakdown below of these newly reported cases by date of collection:

Month	# of positive patients
July	2
August	2
September	13
October	215

The additional 2 deaths being reported today include the following:

- A man in his 60's who was a resident of the City of Dallas. He expired in an area hospital ED, and had underlying high risk health conditions.
- A man in his 80's who was a resident of the City of Richardson. He had been hospitalized, and had underlying high risk health conditions.

The provisional 7-day average daily new confirmed and probable cases (by date of test collection) for CDC week 39 was 348, an *increase* from the previous daily average of 316 for CDC week 38. The percentage of respiratory specimens testing positive for SARS-CoV-2 remains high with 10.7% of symptomatic patients presenting to area hospitals testing positive in week 39.

A provisional total of 252 confirmed and probable COVID-19 cases were diagnosed in school-aged children (5 to 17 years) during CDC week 39 (week ending 9/26/2020). The percentage of cases occurring in young adults aged 18 to 22 years was 12% for the month of September.

Of all confirmed cases requiring hospitalization to date, more than two-thirds have been under 65 years of age. Diabetes has been an underlying high-risk health condition reported in about a third of all hospitalized patients with COVID-19. Of the total confirmed deaths reported to date, about 25% have been associated with long-term care facilities. New cases are being reported as a daily aggregate, with a more detailed summary report updated Tuesdays and Fridays.

Local health experts use hospitalizations, ICU admissions, and ER visits as three of the key indicators as part of determining the COVID-19 Risk Level (color-coded risk) and corresponding guidelines for activities during our COVID-19 response. There were 284 COVID-19 patients in acute care in Dallas County for the period ending on Tuesday, October 6. The number of emergency room visits for COVID-19 like symptoms in Dallas County was

544 for the 24 hour period ending on Tuesday, October 6, which represents around 20 percent of all emergency department visits in the county according to information reported to the North Central Texas Trauma Regional Advisory Council. These numbers reflect a continued increase in patient census, as well as a substantial increase in emergency room visits. You can find additional information on risk-level monitoring data [here](#).

“Today’s numbers continue an upward trajectory that we are seeing in both new COVID-19 cases and hospitalizations, ED visits and the number of patients on ventilators. This, while the number of people getting tested at our free COVID-19 test sites remains low. Please don’t wait until you or a loved one becomes infected or your business sustains an outbreak before you take the advice of local medical experts and the CDC to wear a mask when around others outside your home, maintain six-foot distance and avoid unnecessary crowds.

We are seeing increased cases coming not only from businesses as the Governor has increased occupancy limits but also from home and backyard get-togethers. It’s understandable that the public would falsely believe that the numbers are going down when the Governor is reopening businesses and therefore people have loosened their guard for their home gatherings, but this would be a mistake according to DFW health experts because the fact is the numbers are going up. We must remain vigilant to the simple safeguards that will keep our community safe. There is increasing evidence that masking protects the wearer and those around them so please wear your mask and resist the urge to attend or have large gatherings of any type,” said Dallas County Judge Clay Jenkins.

The Centers for Disease Control and Prevention (CDC) recommends taking everyday preventive actions to help prevent the spread of respiratory diseases, including:

- Avoid close contact outside your home: Put 6 feet of distance between yourself and people who don’t live in your household.
- Cover your mouth and nose with a cloth face cover when around others and continue to keep about 6 feet between yourself and others. The cloth face cover is not a substitute for social distancing.
- Stay home when you are sick, except to seek medical care
- Wash your hands often and with soap and water for at least 20 seconds and help young children to do the same. If soap and water are not available, use an alcohol-base hand sanitizer with at least 60% alcohol.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Avoid close contact with people who are sick.
- Clean and disinfect frequently touched objects and surfaces daily using a regular household cleaning spray or wipes.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash. If you do not have a tissue, use your sleeve, not your hands. Immediately wash your hands.
- Monitor your health daily. Be alert for symptoms. Take your temperature and follow CDC guidance if symptoms develop.
