

FOR IMMEDIATE RELEASE

January 13, 2021

Dallas County Reports 2,994 New Positive 2019 Novel Coronavirus (COVID-19) Cases and 21 Deaths, Including 405 Probable Cases

DALLAS -- As of 1:00 pm January 13, 2021, Dallas County Health and Human Services is reporting 2,994 additional positive cases of 2019 novel coronavirus (COVID-19) in Dallas County, 2,589 confirmed cases and 405 probable cases. There is a cumulative total of 199,948 confirmed cases (PCR test). There is a cumulative total of 25,681 probable cases (antigen test). A total of 1,812 Dallas County residents have lost their lives due to COVID-19 illness.

The additional deaths being reported today include the following:

- A woman in her 40's who was a resident of the City of Dallas. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 40's who was a resident of the City of Glenn Heights. He expired in an area hospital ED and had underlying high risk conditions.
- A man in his 50's who was a resident of the City of Dallas. He was critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 50's who was a resident of the City of Richardson. She was critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 50's who was a resident of the City of Grand Prairie. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Duncanville. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Grand Prairie. He was found deceased at home and had underlying high risk health conditions.
- A woman in her 60's who was a resident of the City of Dallas. She was critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Irving. He was critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 60's who was a resident of the City of Richardson. He was critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Garland. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Duncanville. He had been critically ill in an area hospital and did not have underlying high risk health conditions.
- A man in his 70's who was a resident of the City of Dallas. He had been critically ill in an area hospital and had underlying high risk health conditions.
- A woman in her 70's who was a resident of the City of Dallas. She had been critically ill in an area hospital and had underlying high risk health conditions.

- A man in his 80’s who was a resident of the City of Dallas. He had been hospitalized and had underlying high risk health conditions.
- A man in his 80’s who was a resident of the City of Carrollton. He had been hospitalized in an area hospital and had underlying high risk health conditions.
- A woman in her 80’s who was a resident of the City of DeSoto. She had been critically ill in an area hospital and had underlying high risk health conditions.
- A man in his 80’s who was a resident of the City of Dallas. He was hospitalized in an area hospital and had underlying high risk health conditions.
- A man in his 80’s who was a resident of the City of Dallas. He had been hospitalized in an area hospital and had underlying high risk health conditions.
- A man in his 90’s who was a resident of a long term care facility in the City of Dallas. He expired in the facility and had underlying high risk health conditions.

The provisional seven-day average of daily new confirmed and probable cases (by date of test collection) for CDC week 53 was to **2,227**, which is a rate of **84.5** daily new cases per 100,000 residents—the highest case rate in Dallas County since the beginning of the pandemic. The percentage of respiratory specimens testing positive for SARS-CoV-2 remains high, with **31.0%** of symptomatic patients presenting to area hospitals testing positive in week 53 (week ending 1/2/21). Since the beginning of the pandemic, over 3,864 healthcare workers and first responders have been diagnosed with COVID-19 in Dallas County.

Over the past 30 days, there have been 7,310 COVID-19 cases in school-aged children and staff reported from 674 separate K-12 schools in Dallas County, with 1,842 of these cases reported during the last week of December.

- Since the beginning of the pandemic, a total of 41 cases of COVID-19 have been reported among school nurses and nurse assistants—*almost half (19) of which have been diagnosed within the past week.*
- One COVID-19 outbreak in a school in December originated with spread among 11 staff members, with transmission to 9 students, and subsequent SARS-CoV-2 infections documented among at least 8 household members of these students. One death and one hospitalization occurred from this outbreak.

There are currently 109 active long-term care facility outbreaks. This is the highest number of long-term care facilities with active outbreaks reported in Dallas County since the beginning of the pandemic. A total of 3,286 residents and 1,871 healthcare workers in long-term facilities in Dallas have been diagnosed with COVID-19. Of these, 709 have been hospitalized and 378 have died. About 22% of all deaths reported to date have been associated with long-term care facilities. Thirty-four outbreaks of COVID-19 in congregate-living facilities (e.g. homeless shelters, group homes, and halfway homes) have been reported in the past 30 days associated with 84 cases.

Of all confirmed cases requiring hospitalization to date, more than two-thirds have been under 65 years of age. Diabetes has been an underlying high-risk health condition reported in about a third of all hospitalized patients with COVID-19. New cases are being reported as a daily aggregate, with more detailed summary reports updated Tuesday and Friday evenings are available at: <https://www.dallascounty.org/departments/dchhs/2019-novel-coronavirus/daily-updates.php>.

Local health experts use hospitalizations, ICU admissions, and ER visits as three of the key indicators as part of determining the COVID-19 Risk Level (color-coded risk) and corresponding guidelines for activities during our COVID-19 response. There were 1,197 COVID-19 patients in acute care in Dallas County for the period ending on Tuesday, January 12. The number of emergency room visits for COVID-19 like symptoms in Dallas County was 572 for the same time-period, which represents around 22 percent of all emergency department visits in the county according to information reported to the North Central Texas Trauma Regional Advisory Council. We remain close to record highs and concerned about capacity in the upcoming weeks. Updated UTSW modeling

predicts hospitalization could reach 1,170 – 1,900 by January 22, with cases as high as 3,600/day by the same date, an increase over previous predictions. You can find additional information on risk-level monitoring data [here](#).

On December 3, Trauma Service Area E (TSA E), which includes Dallas County and the greater Dallas-Fort Worth Metroplex, reached seven consecutive days where the percentage of COVID-19 confirmed patients in regional hospitals, as a percentage of available hospital beds, exceeded 15 percent. According to Governor Abbott’s Executive Order GA-32 (GA-32), this makes TSA E an area with high hospitalizations and certain occupancy reductions are automatically triggered by reaching this threshold.

Additionally, the chart below is from the January 12, 2021 Dallas County Health and Human Services 2019 Novel Coronavirus (COVID-19) Summary. The chart shows a summary of confirmed and probable cases and deaths since late June in Dallas County.

Summary of weekly COVID-19 confirmed and probable cases, deaths, and percentage positive laboratory tests, Dallas County (CDC Weeks 25 - 53)

CDC Week	Week Ending	Total Confirmed and Probable Cases	Total School-Aged Cases (5 to 17 years)	Daily Average New Confirmed and Probable Cases*	Daily Average New Confirmed and Probable Deaths**	Percentage of Tests Positive for SARS-CoV-2***
25	6/20/2020	5,852	472	836	5	26.9%

53	1/2/2021	15,592	1,842	2,227	7	31.0%

* For 7-day time period for respective CDC week by date of test collection

** For 7-day time period for respective CDC week by date of death

*** Percentage positive PCR tests in symptomatic patients presenting to area hospital emergency department reporting surveillance data

“Today we report another 2,994 new COVID cases and 21 additional deaths. We continue to see high numbers of COVID hospitalizations in Dallas County and throughout the region. UTSW has updated modeling out that predicts Dallas County could have up to 1,900 patients hospitalized for COVID and roughly 3,600 new COVID cases a day by January 22. These are concerning numbers. Our hospitals are stretched very thin right now and our healthcare heroes have been working tirelessly since last spring. While we are all thankful the vaccine is here and is being administered as quickly as possible, it will still be some time before it’s widely available to those beyond the 1A and 1B populations. In order to best support those healthcare heroes, keep less people from

getting sick, and save as many lives as possible, we must continue to follow public health guidance and wear our mask, avoid crowds, and wash our hands frequently,” said Dallas County Judge Clay Jenkins.

All Dallas County COVID-19 Updates and Information can be found here:

- [Dallas County Measures for Protecting An Institution’s Workforce from COVID-19 Infection: Employer/Employee Guidance](#)
- [Dallas County Guidance for Individuals at High-Risk for Severe COVID-19](#)

The Centers for Disease Control and Prevention (CDC) recommends taking everyday preventive actions to help prevent the spread of respiratory diseases, including:

- Avoid close contact outside your home: Put 6 feet of distance between yourself and people who don’t live in your household.
- Cover your mouth and nose with a cloth face cover when around others and continue to keep about 6 feet between yourself and others. The cloth face cover is not a substitute for social distancing.
- Stay home when you are sick, except to seek medical care
- Wash your hands often and with soap and water for at least 20 seconds and help young children to do the same. If soap and water are not available, use an alcohol-base hand sanitizer with at least 60% alcohol.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- Avoid close contact with people who are sick.
- Clean and disinfect frequently touched objects and surfaces daily using a regular household cleaning spray or wipes.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash. If you do not have a tissue, use your sleeve, not your hands. Immediately wash your hands.
- Monitor your health daily. Be alert for symptoms. Take your temperature and follow CDC guidance if symptoms develop.
